

Name:Rubber damper

Material:EPDM,NBR,CR,NR,IIR,etc

Hardness:50 shore A.

Color: Black

Rubber dampers or shock absorbers are used to reduce the transmission of shock to the surrounding structure. Shock absorption is possible as the rubber absorber deflects under the applied shock load. The construction of rubber dampers (also known as rectangular buffers) is such that rubber that with fixing holes allowing for simple installation.

A wide range of dimensions and rubber hardness options are available from stock or alternatively rectangular buffers and rubber dampers can be specially manufactured to meet the customer's individual requirement.
